ETF performance and index history (from 10/25/16 to 12/31/17)

ETF performance (12/31/17)

	3-months	1-year	3-year	5-year	Since ETF Inception
ETF (at NAV)	0.79%	1.71%	—	—	0.02%
Market price returns	0.79%	1.72%	—	—	0.08%
Barclays Global Aggregate Treasury Ex USD Issuer Diversified Bond Index (USD hedged)	0.94%	2.10%	—	—	0.34%

Performance quoted represents past performance and does not guarantee future results. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance data visit www.Xtrackers.com or call 855-329-3837.

Indexes are unmanaged; you cannot invest in an index. Index performance is gross of fees and assumes dividend reinvestment. Inclusion of fees would have reduced returns.

¹ NAV, or net asset value, usually determined at 4:00 p.m. Eastern Time on each day that the Bats Exchange is open for trading, and is calculated by dividing the ETF's total assets less total liabilities by the number of fund shares outstanding.

² The 30-Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

³ Modified Duration to Worst is the measure of sensitivity of the price of a bond to a change in interest rates, assuming worst case scenario. Modified duration is the approximate percentage change in a bond's price for a 100 basis points change in yield, assuming that the bond's expected cash flow does not change when the yield changes.

⁴ Yield to worst is the lowest potential yield that can be received on a bond without the issuer actually defaulting.

⁵ Credit quality represents the higher rating of either Moody's Investors Service, Fitch Ratings or Standard & Poor's and is their opinion as to the quality of the securities they rate. Credit quality is measured on a scale that ranges from AAA (highest) to D (lowest). Credit quality does not remove market risk and is subject to change.

On 10/2/17 "Deutsche X-trackers" ETFs changed its name to "Xtrackers" ETFs. A complete list of the new names is available at www.Xtrackers.com. Xtrackers ETFs ("ETFs") are managed by DBX Advisors LLC (the "Adviser"), and distributed by ALPS Distributors, Inc. ("ALPS"). The Adviser is a subsidiary of Deutsche Bank AG, and is not affiliated with ALPS. Xtrackers ETFs are not FDIC insured and there is no bank guarantee and they may lose value.

Shares are not individually redeemable, and owners of Shares may acquire those Shares from the Fund, or tender such Shares for redemption to the Fund, in Creation Units only.

Carefully consider the fund's investment objectives, risk factors, and charges and expenses before investing. This and other information can be found in the fund's prospectus, which may be obtained by calling 1-855-DBX-ETFS (1-855-329-3837), or by viewing or downloading a prospectus from www.Xtrackers.com. Read the prospectus carefully before investing.

Nothing contained herein is fiduciary or impartial investment advice that is individualized or directed to any plan, plan participant, or IRA owner regarding the advisability of any investment transaction, including any IRA distribution or rollover.

Risks:

Investing involves risk, including the possible loss of principal. Bond investments are subject to interest rate, credit, liquidity and market risks to varying degrees. When interest rates rise, bond prices generally fall. Foreign investing involves greater and different risks than investing in U.S. companies, including currency fluctuations, less liquidity, less developed or less efficient trading markets, lack of comprehensive company information, political instability and differing auditing and legal standards. Emerging markets tend to be more volatile and less liquid than the markets of more mature economies, and generally have less diverse and less mature economic structures and less stable political systems than those of developed countries. Funds investing in a single industry, or group of industries, country or in a limited geographic region generally are more volatile than more diversified funds. Credit risk refers to the ability of an issuer to make timely payments of principal and interest. Investing in derivatives entails special risks relating to liquidity, leverage and credit that may reduce returns and/or increase volatility. A Fund's use of forward currency contracts may not be successful in hedging currency exchange rates changes and could eliminate some or all of the benefit of an increase in the value of a foreign currency versus the U.S. dollar. This fund is non-diversified and can take larger positions in fewer issues, increasing its potential risk. Performance of the Fund may diverge from that of the Underlying Index due to operating expenses, transaction costs, cash flows, use of sampling strategies or operational inefficiencies. An investment in this Fund should be considered only as a supplement to a complete investment program for those investors willing to accept the risks associated with the Fund. Please read the prospectus for more information. See the prospectus for details.
