

## Xtrackers High Yield Corporate Bond - Interest Rate Hedged ETF (HYIH)

### Strategy

Looking for high-yield exposure, but have concerns about rising interest rates in the near future? Gain exposure to high-yield bonds while potentially dialing down your portfolio's interest-rate risk with Xtrackers High Yield Corporate Bond – Interest Rate Hedged ETF (HYIH). HYIH seeks to track the performance, before fees and expenses, of the Solactive High Yield Corporate Bond – Interest Rate Hedged Index, which is a rule-based index that tracks the performance of a basket of U.S.dollar denominated high-yield liquid corporate bonds.

4th quarter 2017

ETF performance (12/31/17)					
	3-months	1-year	3-year	5-year	Since ETF Inception
ETF (at NAV)	0.63%	4.62%	–	–	2.85%
Market price returns	1.24%	4.31%	–	–	2.96%
Solactive High Yield Corporate Bond - Interest Rate Hedged Index	0.63%	5.06%	–	–	3.54%
Solactive High Yield Corporate Bond Index (Long Only Component)	0.13%	6.41%	–	–	4.75%

Performance quoted represents past performance and does not guarantee future results. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance data visit [www.Xtrackers.com](http://www.Xtrackers.com) or call 855-329-3837.

Indexes are unmanaged; you cannot invest in an index. Index performance is gross of fees and assumes dividend reinvestment. Inclusion of fees would have reduced returns.

<sup>1</sup> NAV, or net asset value, usually determined at 4:00 p.m. Eastern Time on each day that the Bats Exchange is open for trading, and is calculated by dividing the ETF's total assets less total liabilities by the number of fund shares outstanding.

<sup>2</sup> The 30-Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

<sup>3</sup> Modified Duration to Worst is the measure of sensitivity of the price of a bond to a change in interest rates, assuming worst case scenario. Modified duration is the approximate percentage change in a bond's price for a 100 basis points change in yield, assuming that the bond's expected cash flow does not change when the yield changes.

<sup>4</sup> Yield to worst is the lowest potential yield that can be received on a bond without the issuer actually defaulting.

<sup>5</sup> Credit quality represents the higher rating of either Moody's Investors Service, Fitch Ratings or Standard & Poor's and is their opinion as to the quality of the securities they rate. Credit quality is measured on a scale that ranges from AAA (highest) to D (lowest). Credit quality does not remove market risk and is subject to change.

<sup>6</sup> A future is a financial contract obligating a buyer to purchase an asset (or a seller to sell an asset) at a predetermined future date and price.

On 10/2/17 "Deutsche X-trackers" ETFs changed its name to "Xtrackers" ETFs. A complete list of the new names is available at [www.Xtrackers.com](http://www.Xtrackers.com). Xtrackers ETFs ("ETFs") are managed by DBX Advisors LLC (the "Adviser"), and distributed by ALPS Distributors, Inc. ("ALPS"). The Adviser is a subsidiary of Deutsche Bank AG, and is not affiliated with ALPS. Xtrackers ETFs are not FDIC insured and there is no bank guarantee and they may lose value.

Shares are not individually redeemable, and owners of Shares may acquire those Shares from the Fund, or tender such Shares for redemption to the Fund, in Creation Units only.

## Risks:

Investing involves risk, including the possible loss of principal. Bond investments are subject to interest rate, credit, liquidity and market risks to varying degrees. When interest rates rise, bond prices generally fall. Credit risk refers to the ability of an issuer to make timely payments of principal and interest. Investments in lower-quality ("junk bonds") and non-rated securities present greater risk of loss than investments in higher-quality securities. The fund seeks to mitigate the potential negative impact of rising Treasury interest rates by taking short positions in U.S. Treasury notes or bonds, or futures relating to those instruments. These short positions are not intended to mitigate credit risk or other factors that may have a greater impact on performance than rising or falling interest rates. The short positions may limit the potential positive impact of falling interest rates and there is no guarantee that the short positions will completely eliminate the interest rate risk of the long positions. Investing in derivatives entails special risks relating to liquidity, leverage and credit that may reduce returns and/or increase volatility. This fund is non-diversified and can take larger positions in fewer issues, increasing its potential risk. Performance of the Fund may diverge from that of the Underlying Index due to operating expenses, transaction costs, cash flows, use of sampling strategies or operational inefficiencies. An investment in this fund should be considered only as a supplement to a complete investment program for those investors willing to accept the risks associated with that fund. Please read the prospectus for more information. See the prospectus for details.
